RISK ENGINEERING DATABASE

AWARD WINNING RISK MANAGEMENT SOFTWARE

We know what is important to our customers. Improving risk is a partnership process that requires a close working relationship between the risk consultants and the risk owners. Getting things done in an otherwise busy world needs reliable data with easy access, in real time. We know from experience that RSAred delivers this. Be it from no cost or low cost human element risk improvements, through to major capital expenditure to reduce large loss expectancies, RSAred can help focus effort on the items that matter.

WHAT IS RSAred?

RSAred is an innovative web-based application that allows customers to manage risk engineering data in real time, including risk improvement tracking, risk profiling and modelling, and customer portfolio analysis.

THE BENEFITS

RSAred CAN HELP YOU:

☑ Remove adverse financial exposure from your business

☑ Reduce the frequency of avoidable losses

☑ Focus and prioritise risk management funding

☑ Stay on plan with business goals and objectives

ACCOUNT PORTAL:

KEY FEATURES:

Risk improvements
Track the progress of risk improvements through easy to understand charts updated in real time.

Quantitative risk assessment
Improve your risk quality ratings profile by implementing improvements which have the greatest reduction impact.

Loss estimates
Focus time and effort on areas that reduce your financial exposures.

Hazard analysis and site details
Highlight key risk features and identify inadequately protected hazards or increased exposures.

Service agreements
Check the progress of your risk engineering programme through an overview of planned and completed risk management activities.

Risk benchmarking
Via your RSA Risk Engineering account manager, benchmark your performance against your industry sector risk profile.
